(54) IMAGE FORMING DEVICE

(57)Abstract:

PROBLEM TO BE SOLVED: To provide an image forming device which hardly electrify a recording medium at all when feeding the recording medium (especially roll paper).

SOLUTION: When it is decided that a front cover 48 is open and at the same time a pinch roller 26 is left from a feed roller 24 and the roll paper 36 is released, a rotary fan 40 is rotated with such slow speed of rotation as the roll paper 36 does not touch with a discharge vent of ink.
